Course Name – Product Design Thinking And Framework

Collage Name- Quantum University

Batch Number- 01

Week 5, Task 1

Task Management Application:

1. Backlog

User Stories for the "To-Do List App":
As a user, I want to be able to add tasks to my to-do list. As a user, I want to set deadlines for tasks.As a user, I want to categorize my tasks by tags (e.g., "Work", "Personal").

2. To Do
These tasks have been prioritized from the backlog.
Example tasks:
Create user interface for adding a task. Implement task categorization by tags. Set up notification system for upcoming tasks. Create user interface for editing tasks.

3. In Progress
These are the tasks that are actively being worked on by the development team.
Example tasks in progress: Design UI for displaying tasks in a list. Set up backend API for adding and deleting tasks. Create the user interface for setting deadlines.

4. Testing
This is where tasks go once they are implemented and need to be tested to ensure they work as expected.
Example tasks in testing: Test adding and deleting tasks functionality. Test categorization feature. Test deadline notifications.

5. Done
This column holds completed tasks that are fully developed, tested, and ready for deployment.
Example tasks done: Task UI created and functional. Task deletion implemented and working. Notification system working for deadlines.
